DISPLAY AND MONITORING UNITS

The universal display unit HDA 5500 provides the means of visualizing and further processing the signals from our sensors.
The unit is designed for front panel mounting with a standard 92 x 45 mm cut-out.

Universal display unit for general applications:

HDA 5500

Digital Display Unit HDA 5500

Description:

The digital display units in the HDA 5500 series are microprocessor-controlled display and monitoring instruments designed for control panel installation.

Different versions are available with a maximum of 3 analog inputs, an analog output (4 .. 20 mA or 0 .. 10V) and up to 4 relay outputs.

The analog input signals are displayed according to the settings selected by the user.

Each of the relay outputs can be allocated to each of the sensor inputs or to the differential between input 1 and 2.

A PT 100 temperature probe can be connected directly to the instrument. There is also an option for frequency measurement using the HDS 1000 (HYDAC rpm probe), for example to measure the speed of rotating components.

Depending on the model, it is also possible to connect SMART sensors (condition monitoring sensors).

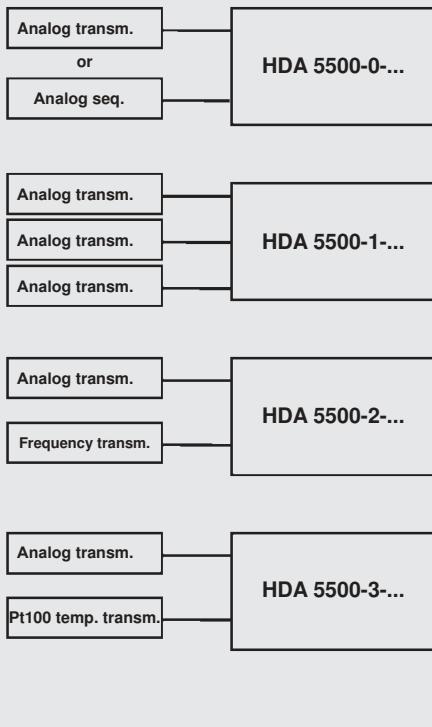

SMART sensors are a generation of sensors from HYDAC which can transmit several different measured values.

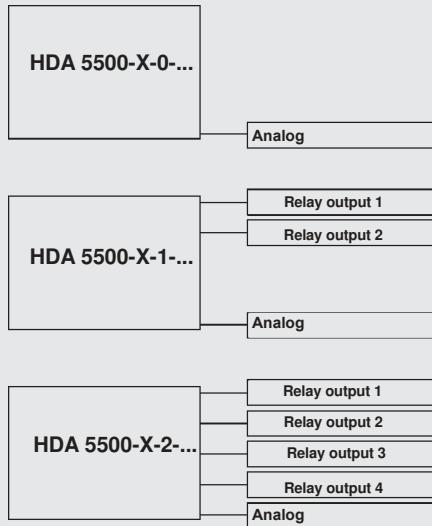

Special features:

- Digital display of analog signals
- Clear 4-digit 7-segment LED display
- Up to 3 analog inputs (4 .. 20 mA, 0 .. 10 V or 0 .. 5 V)
- Accuracy $\leq \pm 0.5\%$
- Differential measurement possible
- Analog output (4 .. 20 mA or 0 .. 10 V)
- Up to 4 relay switching outputs
- RS 232 interface
- Voltage supply 12 .. 32 V DC or 85 .. 265 V AC 50 / 60 Hz
- Option for PT100 sensor input or frequency input
